

# Industrial Aluminium Profiles

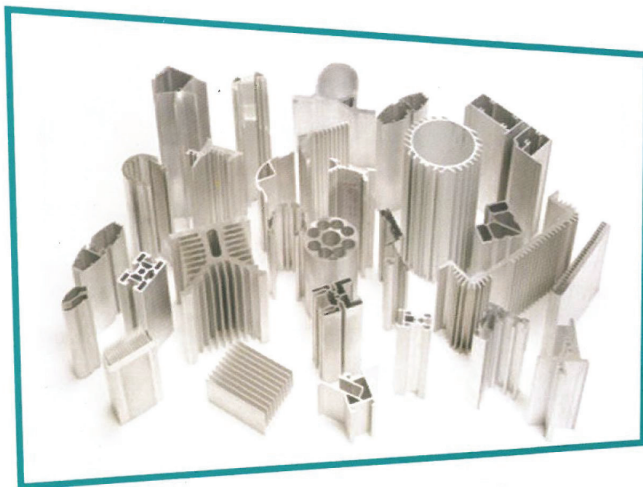

We transform your ideas  
into products

# Want to construct and manufacture a new product ?

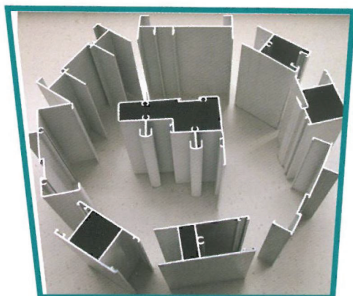

## Want profiles with:

- different alloys
- various dimensions
- special manufacturing requirements

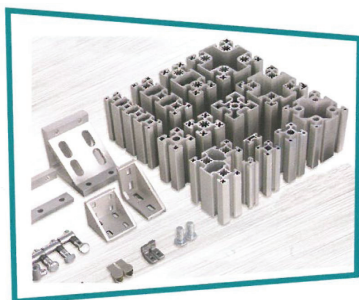

M E T A L O U M I N

## What we offer to our partners

- Know how from our R & D development department
- Customized software for the design of products with special intersections and requirements

- Flexible production for specialized alloys of high resistances/strengths
- Ability to manufacture profiles of special requirements in terms of tolerances and piercing

Our 40 years of experience  
is your warranty

## Aluminium profiles for lighting fixture applications

**Metaloumin S.A. is an aluminum extrusion industry in Greece established at 1969**, producing its own standardized series of domestic and industrial aluminium profiles for doors & windows, special profiles tailor made to customer's specifications (ladders, green-houses etc) and mounting systems for photovoltaic and solar thermal applications.

We also study, design and manufacture aluminium profiles and accessories for lighting fixtures. Our profiles provide solutions for every type of lighting application ensuring optimum cost efficiency, proper functioning and life prolongation.

Metaloumin's experienced engineering team has developed multiple geometries and designs, following contemporary market trends. Our products' are warranted for meeting the resistance requirements of heat dissipation and life span. Further, our R & D dpt constantly works on new designs and applications to expand our product range and thus better satisfy customer needs.

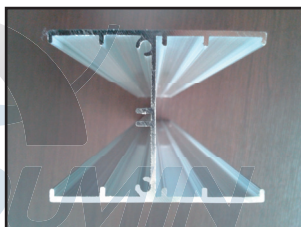

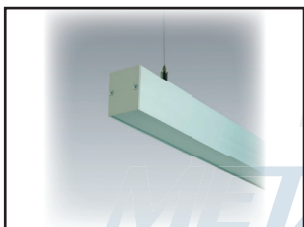

Our complete range of standard and custom aluminium profiles for lighting fixtures enables designers, manufacturers and builders to create compact, customized and functional end products.

### Our lighting fixtures cover the following product ranges:

#### Technical lighting for exterior and interior use for industry, business, offices

#### Decorative lighting

## LED lighting

## Accessories for technical lighting requirements

## Special applications to customers'

### Competitive advantages of our lighting fixtures:

- Vertical in-house production beginning with aluminium as raw material and resulting in studied products
- Large variety of designs covering custom and contemporary markets
- Electrostatic coating or Anodized finish for either external or internal uses
- Qualanod quality for sulphuric acid-based anodizing of aluminium
- Qualicoat quality for paint, lacquer and powder coatings on aluminium
- Production process certified with EN ISO 9001: 2008 TUV Cert Austria and EN ISO 14001:2004 TUV Cert Austria standards
- Polycarbonate cover availability for LED lighting

## Our product range falls into the following market segments

|                         |                                  |
|-------------------------|----------------------------------|
| Air vents               | Heaters                          |
| Aeration                | Heating                          |
| Air conditioning        | Hoods                            |
| Awnings                 | Inscriptions- Signs              |
| Bleachers               | Lighting                         |
| Boilers                 | Medical Equipment                |
| Business Refrigeration  | Photovoltaic Mounting Structures |
| Construction Industries | Picture Frames                   |
| Curtain Rods            | Prefabricated Houses             |
| Curtains & Blinds       | Road Signs                       |
| Electrical Goods        |                                  |
| Fences                  | Shop Equipment                   |
| Fixtures                | Solar Systems                    |
| Furniture               | Stairs                           |
| Green Houses            | Storefronts                      |
| Gutter Systems          | Umbrellas                        |
|                         | Vehicle industries               |
